

INTEL — client / competitor / market research

- tvt-intel-pipeline** — master orchestrator; runs the full research package end to end, resumable.
- tvt-intel-deep** — first deep-dive research cycle on a new prospect.
- tvt-intel-customer** — 5-step deep cycle — financials, platform, insider knowledge, market, case studies. Top-ranked accounts only.
- tvt-intel-dossier** — narrative account story + relationship map (org chart).
- tvt-intel-fanout** — scans research/transcripts for named competitors/vendors, researches each.
- tvt-intel-qbr** — quarterly business review prep — internal signal + industry + peer + tech-frontier triangulation.
- tvt-intel-factcheck** — verifies every claim in an intel file against external sources — mandatory before a POV.
- tvt-intel-dispatch** — parallel research fan-out across many prospects at once (ECS Fargate agents).
- tvt-intel-flywheel** — extracts patterns that repeat across 2+ clients into reusable playbooks.

SALES POINT-TOOLS

- tvt-sales-pack** — assembles a client-tailored presales artifact; optional Tavant branding pass.
- tvt-sales-pitch** — content strategy for a sales deck — what the slides should say, before building them.
- tvt-sales-engagement-proposal** — client-facing engagement proposal (.docx), Tavant consultative style.
- tvt-sales-distill** — sharpens the sales-pattern playbook after meetings — run weekly.

PRESENTATION

- tvt-create-deck** — full deck pipeline — content strategy → visual design → branded build in one workflow.
- tvt-create-pptx** — create, edit, read, screenshot PowerPoint decks.
- tvt-create-design** — visual design pass — canvas art, generative art, frontend UI, claude.ai artifacts, Slack GIFs, themes.
- tvt-create-explainer** — persuasive multi-section PDF — describes first, argues last, names the trade-off.
- tvt-tavantize** — converts any deck/outline into official Tavant-branded PPTX.

CORE KERNEL — shared engine, 7 skills

- tvt-core-eval** — universal evaluation engine — score, summarize, compare, bench, regress, gate, coverage, calibrate.
- tvt-core-extract** — universal extraction engine — signals, entities, patterns, pain-point mappings from any text.
- tvt-core-write** — universal writer — any canonical output file, with built-in quality validation.
- tvt-core-lookup** — "connect the dots" engine — cross-references signals against portfolio/intel/playbooks.
- tvt-core-mcts** — Monte Carlo Tree Search engine — best action sequence for any decision problem with a defined state space.
- tvt-core-portfolio** — unified portfolio state manager — read/score/patch through one interface.
- tvt-core-clarify** — guided intent clarification — fuzzy idea → shared understanding, one question at a time.

GOVERNANCE & AGENT — g-sales-engine's own transitive deps (kept g-prefixed, vendored as-is)

- g-gov-guard** — redacts/masks CRM PII before it's used anywhere.
- g-gov-attest** — tamper-evident, hash-chained decision ledger — the backtest substrate.
- ai-solution-thinker (agent)** — structures a new AI-solution design from a raw pain point.

GENERAL COGNITIVE — 6 skills, reasoning/quality layer

- tvt-os-metacognition** — rep-facing critique front door — routes a new idea/plan to contrarian and/or judge, picks light vs. deep by stakes, returns one verdict.
- tvt-os-contrarian** — devil's-advocate red-team pass — light (inline) or deep (multi-model panel) — ends in an evidence-gated recommendation.
- tvt-os-judge** — autonomous reviewer/gate for AI-generated artifacts — 4-axis drift score, block-on-fail.
- tvt-os-prompt** — turns a rough idea into a polished, copy-ready prompt artifact (CO-STAR gap check).
- tvt-os-loop** — orchestrator across all core skills against a brief.
- tvt-grill-me** — interviews the user relentlessly on a plan until every branch is resolved.

HUNT — net-new logo, prospect → pitch

Goal: build a qualified pipeline and get to a first pitch

tv-t-intel-dispatch → tv-t-intel-deep → tv-t-intel-factcheck →
tv-t-sales-pitch → tv-t-create-deck → tv-t-sales-pack

Fan out across the whole target list, deep-dive whoever surfaces as a real fit, verify every claim before it's client-facing, then turn the story into a branded, presales-ready pack.

EXPAND — quarterly business review

Goal: walk into a QBR with a signal-backed narrative

tv-t-intel-qbr → tv-t-core-lookup → tv-t-os-contrarian →
tv-t-create-deck

Triangulate internal + industry + peer signal, cross-reference it against the existing portfolio/playbook library, red-team the story before the client sees it, then build the deck.

DEFENSIBLE POV — any client meeting

Goal: never bring an unverified point of view into a client room

tv-t-intel-deep → tv-t-intel-factcheck → tv-t-os-judge →
tv-t-create-explainer

Factcheck is the mandatory gate before any POV leaves the building; judge catches drift in the artifact itself; the explainer format describes first and argues last.

COMPETITIVE DISPLACEMENT

Goal: win a deal where a named competitor is already in the room

tv-t-intel-fanout → tv-t-core-extract → tv-t-os-contrarian →
tv-t-sales-pitch

Research every competitor/vendor named in the transcripts, pull the pain-point mappings out of that research, stress-test the displacement argument, then write the pitch.

FLYWHEEL — turn a win into reusable IP

Goal: one client's pattern becomes everyone's accelerator

tv-t-intel-flywheel → tv-t-core-write → tv-t-sales-distill

Extract the pattern that repeated across 2+ clients, write it up as a canonical playbook doc, then fold it into the weekly sales-pattern sharpening pass.

Overlay layer — applies on top of any chain above, not a step you add yourself

tv-t-os-metacognition — wraps any step and auto-routes to contrarian and/or judge, picking light vs. deep by stakes, instead of hand-picking one.

g-gov-guard — redacts/masks CRM PII the instant it enters any chain — fires automatically, never a manual step.

g-gov-attest — hash-chained decision ledger behind tv-t-core-mcts / tv-t-os-judge outputs, when a decision needs to be backtested later.
